Abstract

project analyzes the tourism sector in Bangladesh by evaluating key data points from various tourist spots. Using insights from government revenue, visitor trends, accessibility, and development costs, the report identifies high-impact locations and areas for improvement.

Findings reveal that Kuakata Beach generates the highest revenue, while winter and spring are the peak tourist seasons. Accessibility remains a priority, with most locations accommodating disabled visitors. However, discrepancies exist in revenue-to-cost ratios, suggesting the need for optimized investment strategies.

To enhance tourism, recommendations include dynamic ticket pricing, strategic marketing, improved accessibility standards, and seasonal promotions. The report serves as a comprehensive guide for policymakers and stakeholders to drive sustainable growth in the tourism industry of Bangladesh.
